

Geographic context of the five independent bottleneck lineages of *Lepidium papilliferum*

Topographic background (DEM, AWS Terrain Tiles) | Snake River (Natural Earth, scale 10) | Reference cities as black squares

y population in the lineage). Filled hulls = group-level habitat footprint (locations connected within 500 m pollinator threshold). Points = sampling locations sized by census population size (fertile + vegetative), filled with parent BL colour. Locked Set1 palette: BL1 red, BL2 blue, BL3
Map shows full geographic context (cities, river, topography) for audiences requiring landscape setting; population coordinates are locatable from this figure and the figure should be shared accordingly.
